

Kingston Armstrong

Allen, TX 75002 | kingstonarms2k5@gmail.com | (816) 394-8355 | kiingst.github.io

PROFESSIONAL SUMMARY

Computer Science student at the University of North Texas with hands-on experience building and deploying backend systems, containerized server infrastructure, and full-stack web applications. Skilled in Python, SQL, and Docker, with practical experience isolating and managing services on Linux and developing backend logic connected to browser-based interfaces.

EDUCATION

University of North Texas

B.S. in Computer Science. GPA: 3.3.

Relevant Coursework: Data Structures, Algorithms, Software Engineering, Database Systems, Logic Design

Denton, TX

May 2027

EXPERIENCE

Software Engineering Intern

May 2026 – August 2026

Urit Software Development

- Ported the user interface of AGIS's LifeRing application from Android to Apple Watch using JavaScript, reproducing all existing screens and adapting layouts for the Apple Watch display.
- Implemented screens, buttons, menus, and navigation components as part of the cross-platform UI migration.

PROJECTS

Minecraft Server Manager <https://github.com/Kiingst/game-server-manager>

Python, SQL, Docker | Web-based Server Management App

- Built a Linux-based web application for managing Minecraft servers through Docker containers, deployed on a self-hosted Linux server.
- Developed a Flask web interface enabling users to start, stop, and manage game servers from a browser; personally hosted over 20 server instances using the system.
- Stored server data and configuration settings in a SQL database for persistent access.
- Used Docker to isolate each server instance for consistent, repeatable deployment.

Time Runner

Godot, C# | Time-Based Platformer Game

- Designed and developed a puzzle platformer where players can rewind time back five seconds.
- Implemented a time-recording system to track player movement, position, and actions.
- Built gameplay mechanics and level challenges using C# scripts in the Godot game engine.

UNT Quick Bytes <https://github.com/Azula19-b/3444-CP->

JavaScript, CSS, HTML, SQL | Food Database Viewer

- Collaborated with a team to build a web application displaying food options served at UNT dining halls, including filtering for dietary restrictions.
- Designed a front-end interface using HTML, CSS, and JavaScript connected to a backend server.
- Organized and structured dining hall menu data to make options easier for students to browse and compare.

SKILLS

Programming Languages: Python, SQL, JavaScript, C#, C, C++, Java, HTML/CSS, BASH

Frameworks & Technologies: Docker, Flask, AWS, Godot

Developer Tools: Git, GitHub, VS Code, Visual Studio, IntelliJ

Operating Systems: Linux, Windows, MacOS
